HTML Web Hunt

By Daniel Campiglia P.5

What does HTML stand for?

HTML Stands for Hyper Text Markup Language

What is HTML?

HTML is the standard markup language for creating and developing web pages

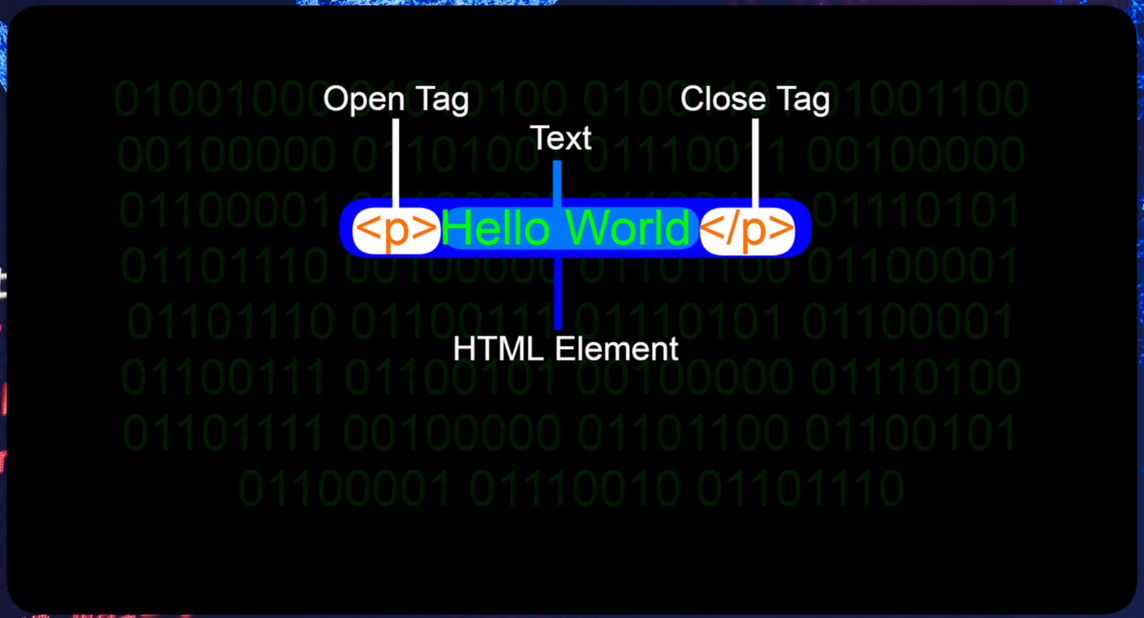
What is a HTML element?

HTML elements are pieces of code that work together to tell the browser how to display content.

An example of a HTML element would look like this: " Hello World "

What is a HTML tag?

A HTML tag is a part of the HTML element that tells the computer what command is to be run.



TOPIC: CSS

CSS (Cascading Style Sheets) is the programming/markup language used to style HTML. Implement CSS into your program by using the <style></style> tags.

TOPIC: Web Browser

A web browser is a portal onto the World Wide Web (WWW). A web browser is a piece of software that allows you to contact a search engine Eg. Google to search on the web!

Why should you learn HTML?

You should learn HTML? This is because people spend at least 4-5 hours each day online. Soo... Why not create a website and make money while your at it.

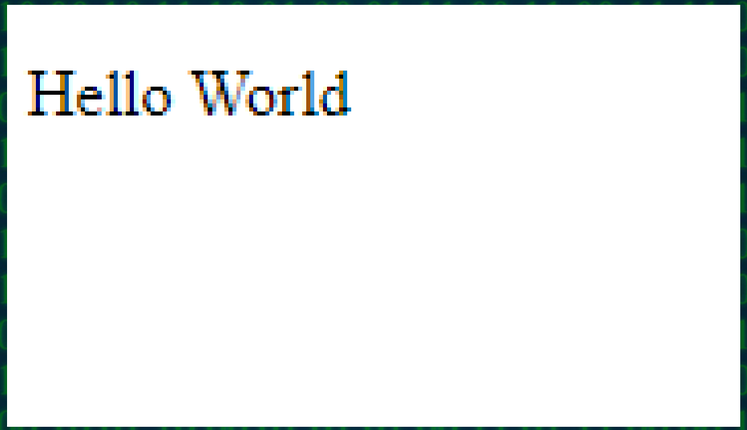
Their are many careers that use HTML and here are some of them

1. Web designer for company
2. Freelance Web Designer
3. Java Developer

And more!

The paragraph tag is used to create a small paragraph on your web page

It looks like this: Hello World



A HTML attribute can change the way HTML works

Example: Hello World

HTML attribute

Hello World

Defining your code language

To define your language you can use <!DOCTYPE html>
